Subject: GoldSim Input tables

Dave and Bill,

Previous versions of the GoldSim model were posted on the Barr client access website and included revised Workplan data input tables, GOLDSIM model codes, and CV drawings. Highlighted in the input tables were new input values that changed from previous model versions. The current (version 4) model results have not been posted on the Barr client access website and the ftb files are only the model output spreadsheets.

Will Barr be posting the new models, results, and backup on their client access website as they have done in the past? This information is necessary in order to proceed with the site performance review. It's possible that Barr wants to wait until a new version of the model can be run that includes the revised surface water (SWIM) results.

Regards,

Fred
