Subject: Re: Mine Site Control Volumes

Yes, I'll take a first crack at drawing control volumes on the Mine Site flow chart. These will be preliminary and Peter is welcome to improve on them given his better understanding of the model. I will get something out end of business today. Peter can contact me anytime this weekend on my cell (970-213-804).

Fred

Fred-

Peter is able and willing to get started working on pulling information from the Mine Site model over the weekend if you are able to get him the first batch of Control Volumes that you are interested in. Peter and Cory have been communicating, and Peter should be up to speed on the type of information you are looking for and the format you need it in.

Thanks,

Tina
