**Subject:** Tetra Tech Review of NorthMet GoldSim Model

Erik-

As you are aware, PolyMet requested that the Foth team conduct an independent review of the Mine Site and Plant Site GoldSim models that have been developed for the NorthMet Project. The results of this review are included in the attached document. The attached document includes a cover memo that documents the scope of the review, the versions of the documents and models that were reviewed, and the outcome of the review. Also included in the document are the spreadsheets provided by Tetra Tech (a subcontractor to Foth) containing the results of their review and the actions taken by Barr to remedy the identified issues. As is stated in the memorandum, the model changes that are necessary as a result of this review do not affect the model predictions pertaining to water resource objectives.

Please let me know if you have any questions or concerns,

Tina
