

Exhibit C Initial and Final Design of the Facilities

The Initial design for the FBI radio equipment was to install 4 VHF unity gain antennas (manufacturer RFS, model BA1012, 4.5') on the south cat walk. All four antenna's coaxial cables (CommScope RG-214) to be terminated in IDF Room # 7.23.2. A 72" tall, two post, 19" equipment rack installed in IDF room on the far wall. This rack will retain the FBI radio equipment, still yet to be determined. Frequencies have yet to be assigned but once assigned, will be coordinated with the Minnesota Sports Authority and the National Football League.
